

# Now it really pays to weatherize homes with the Typar® Weather Protection System.

## Typar® Weather Protection System meets new RESIDENTIAL WEATHERIZATION TAX INCENTIVES.

Now homeowners can improve their homes' energy efficiency and save on their taxes with the Typar Weather Protection System.

The Typar Weather Protection System provides an extra layer of protection to a home's exterior, providing the optimal balance of water/air holdout and moisture vapor transmission. So it reduces the chance of exterior air and water from entering the wall cavity, and helps save energy costs.

And now with the new federal tax credits for energy efficiency, homeowners who install the Typar system get the added bonus of tax savings. Used as a complete system, the Typar Weather Protection System qualifies for federal tax credits at 30% of the cost (up to \$1,500) in 2009 and 2010.

# START SMART with the Typar® Weather Protection System.

The Typar Weather Protection System—comprised of Typar® HouseWrap or Typar StormWrap™, a family of flashing products and construction tape—helps create energy-efficient, comfortable, healthy homes.

## **Typar prevents air and moisture from penetrating a home.**

Typar HouseWrap is the foundation of the Typar Weather Protection System. It acts as the primary line of defense against the elements during the construction process, and a secondary water barrier after the siding is installed. Typar's optimal perm rating (11.7 US perms) allows the wall cavity to breathe, so moisture can escape the wall cavity. Finishing the job with Typar flashings and tape to button up seams, edges and openings, effectively seals the building envelope for optimum performance.

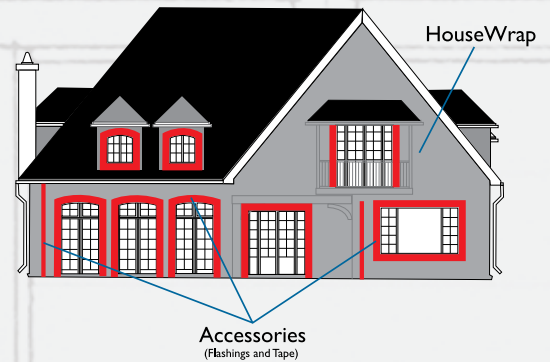

## **Backed by an industry-leading warranty.**

The Typar Weather Protection System provides the added security of the 10-year Start Smart limited warranty. It guarantees complete coverage of labor and material if the system fails after being properly installed. Individual Typar products are also backed with a lifetime limited product warranty.

## **Typar system products qualify for the residential tax credit for 2009 and 2010 taxes.**

To receive the tax credit, homeowners must have the Typar Weather Protection System installed to manufacturer guidelines. The Manufacturer's Certification Statement can be printed from: [typar.com/pdfs/TaxCertificate.pdf](http://typar.com/pdfs/TaxCertificate.pdf). The certificate should be retained along with receipts detailing the qualifying costs. Homeowners may then claim the credit by submitting Form 5695 with their taxes.
